Modular furniture collection

1) Main piece of furniture

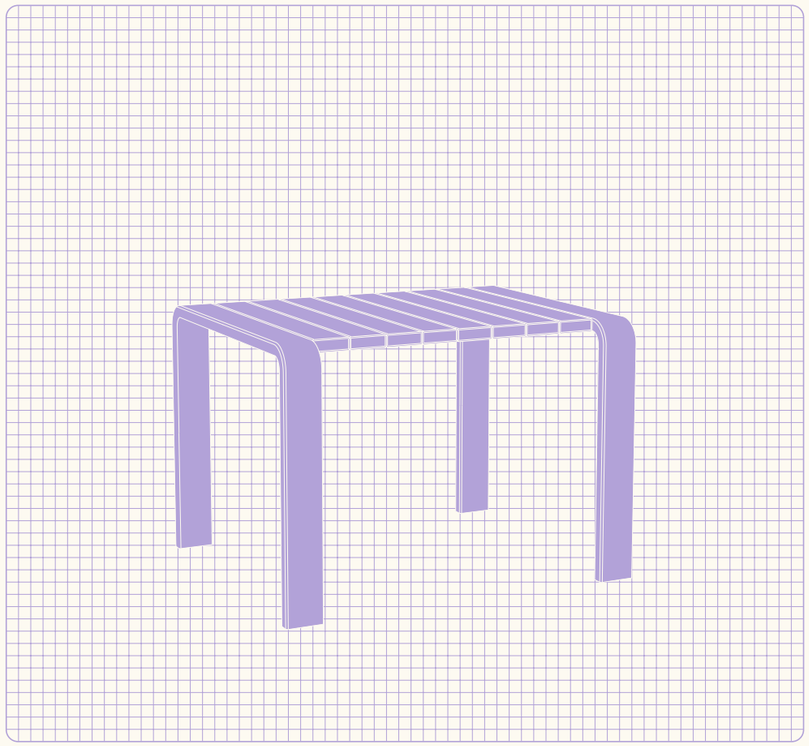

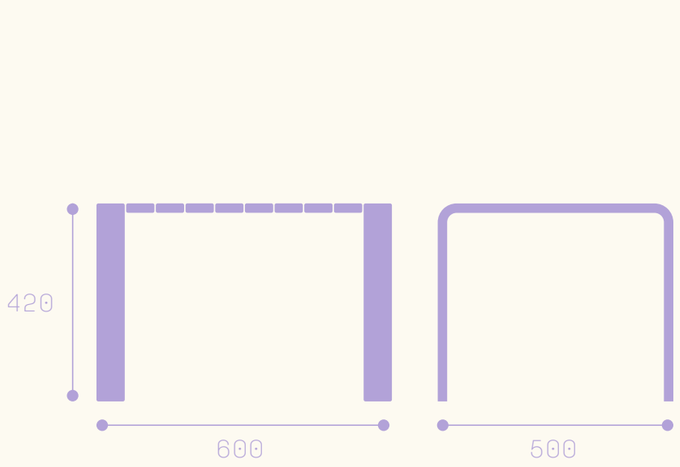

Modular Seating

The centerpiece of the collection is a modular seating system composed of three different elements, which are designed to connect effortlessly with one another. The modules can be arranged in countless configurations, creating endless possibilities for home, office, and retail spaces. All modules are made from 6 × 2 cm rectangular hollow steel tubes, which are bent and welded together. This process simplifies production while also maintaining a cohesive and consistent design language.

Connection system

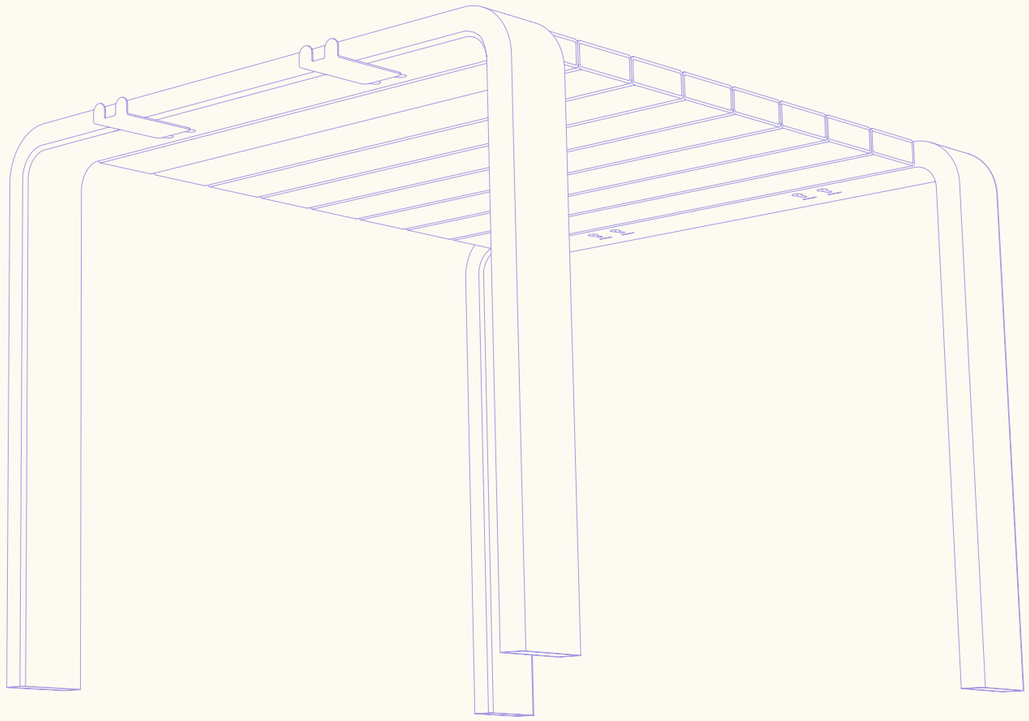

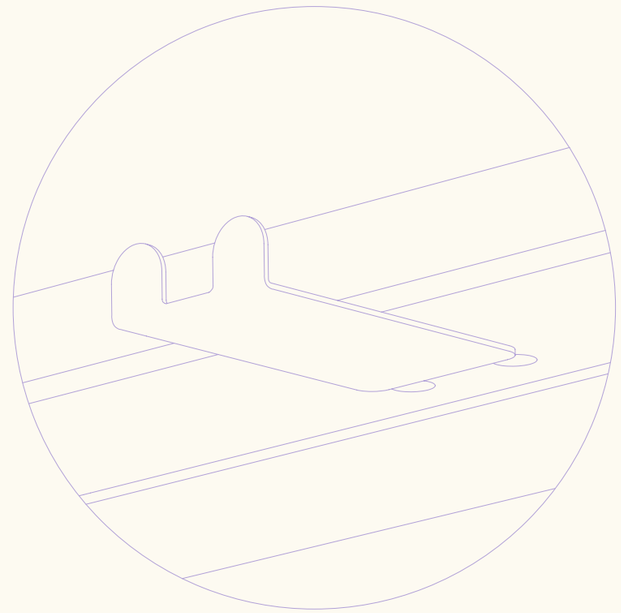

connector
(stainless steel)

(01) Keyhole slot system: The connector is inserted through the larger opening and slid into the more narrow channel in order to secure it.

Connection system

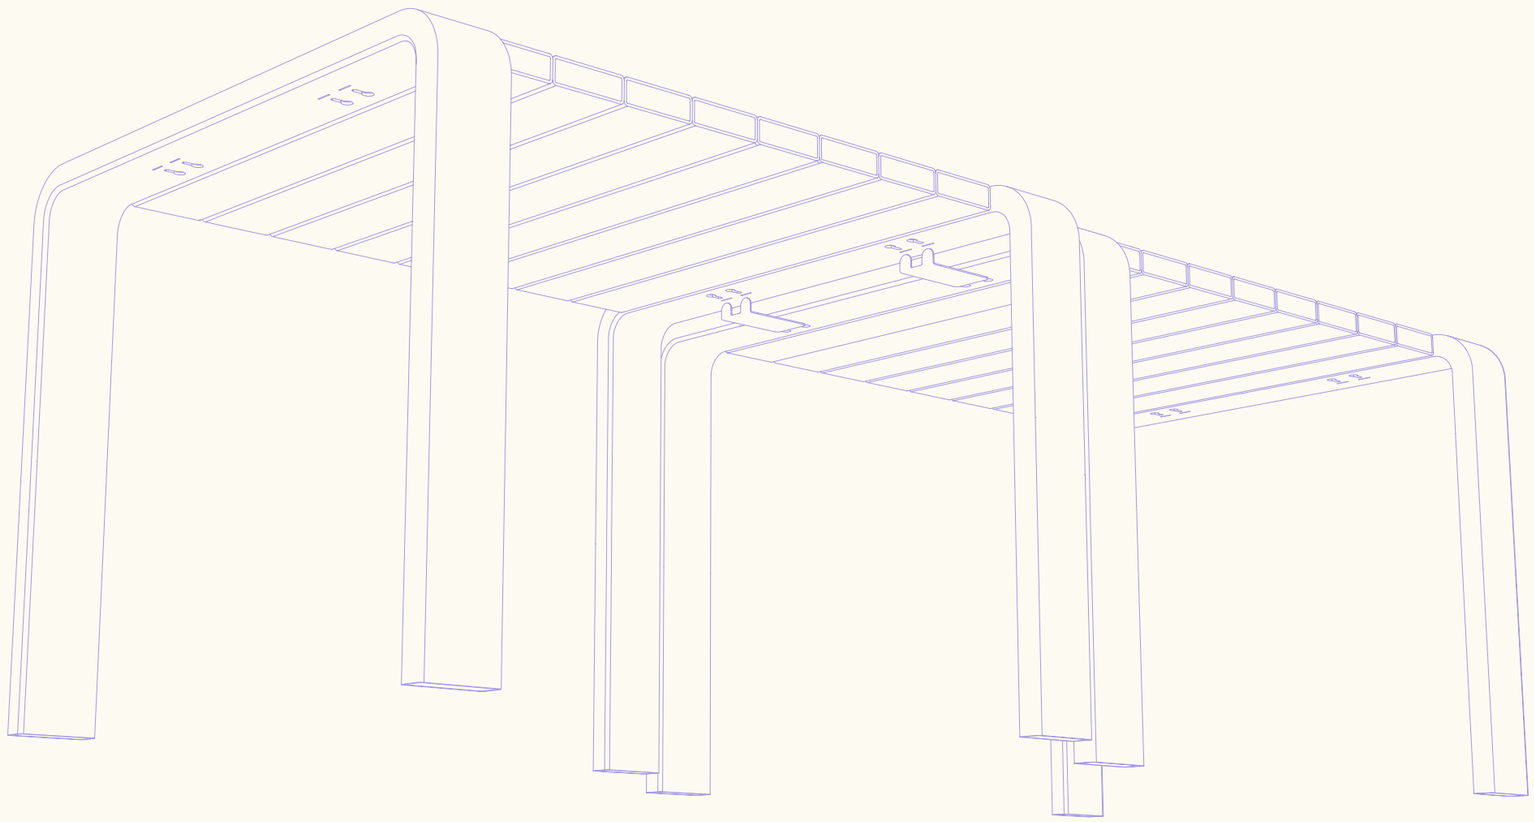

connector
(stainless steel)

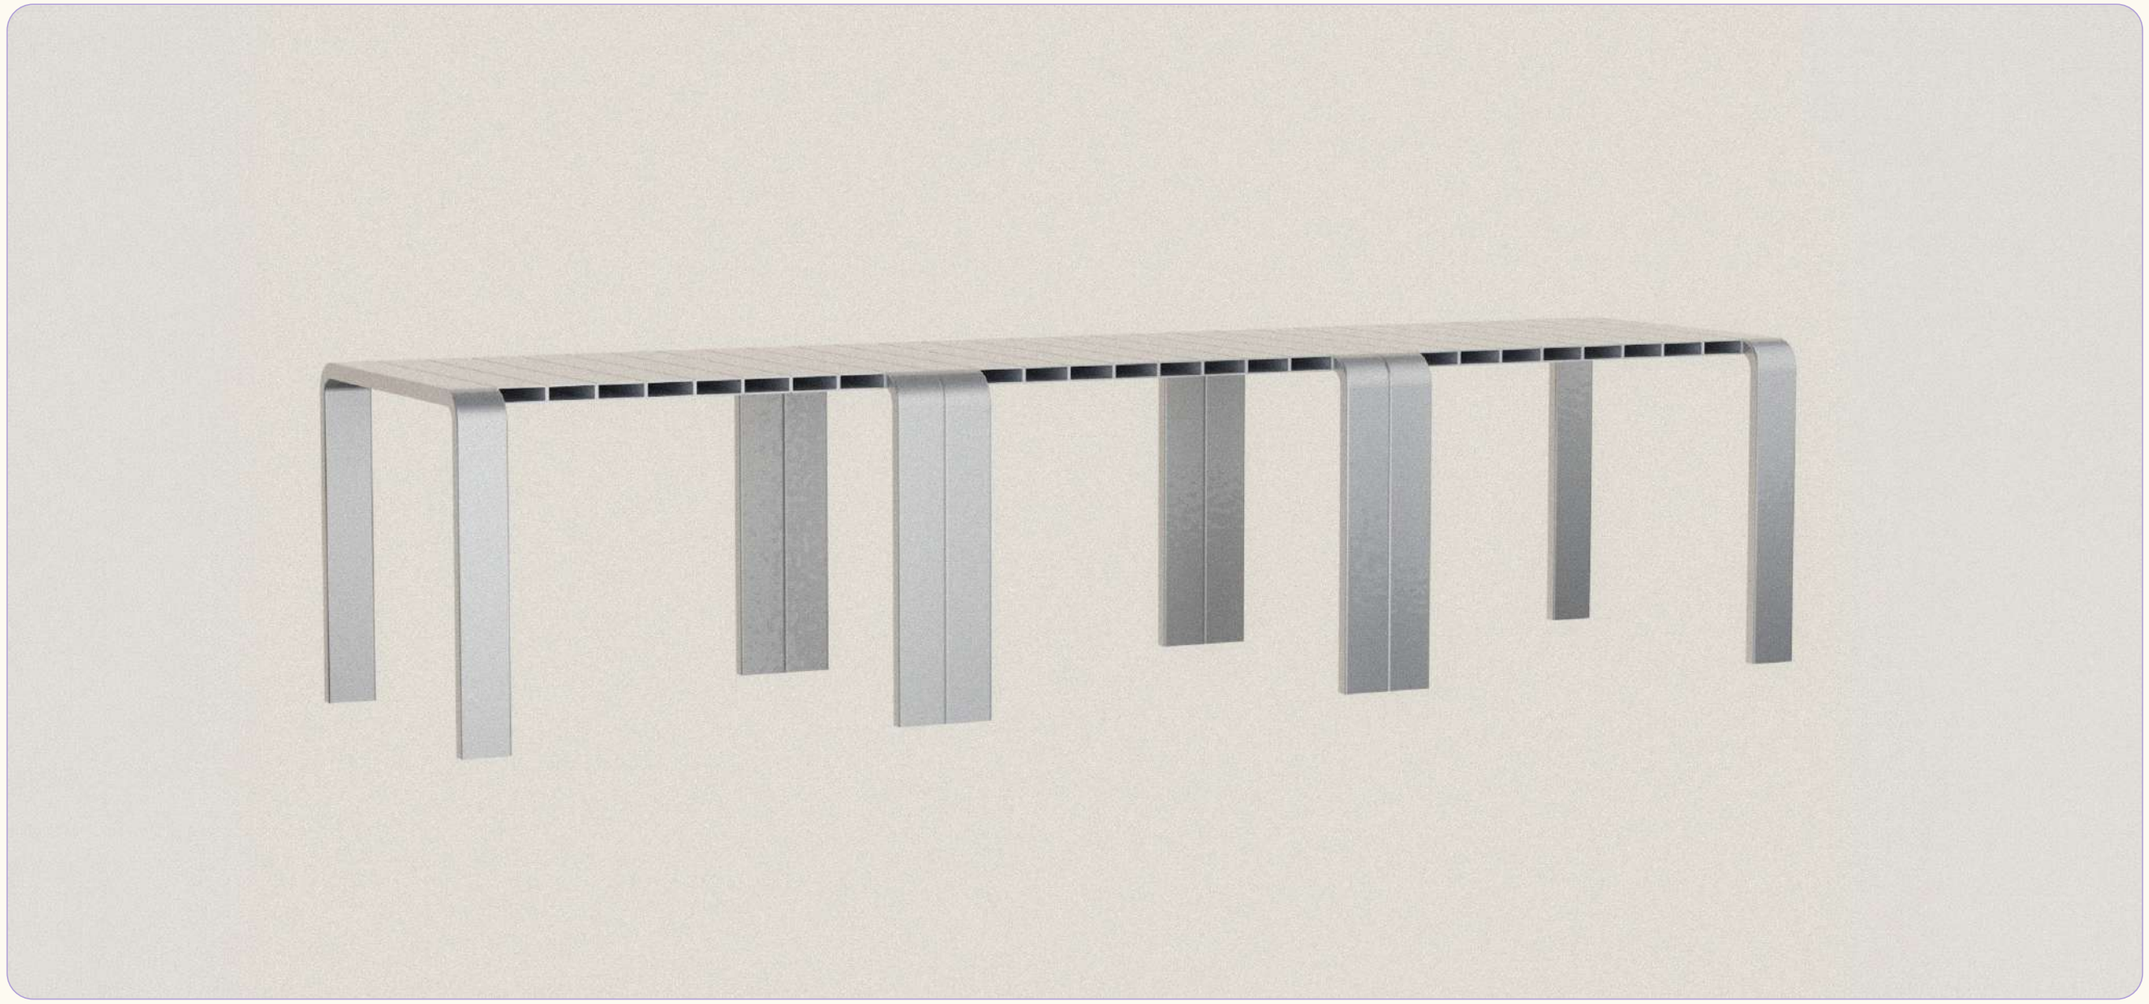

(02) Once secured, the connector forms two hooks, ready for attaching the next element.

Connection system

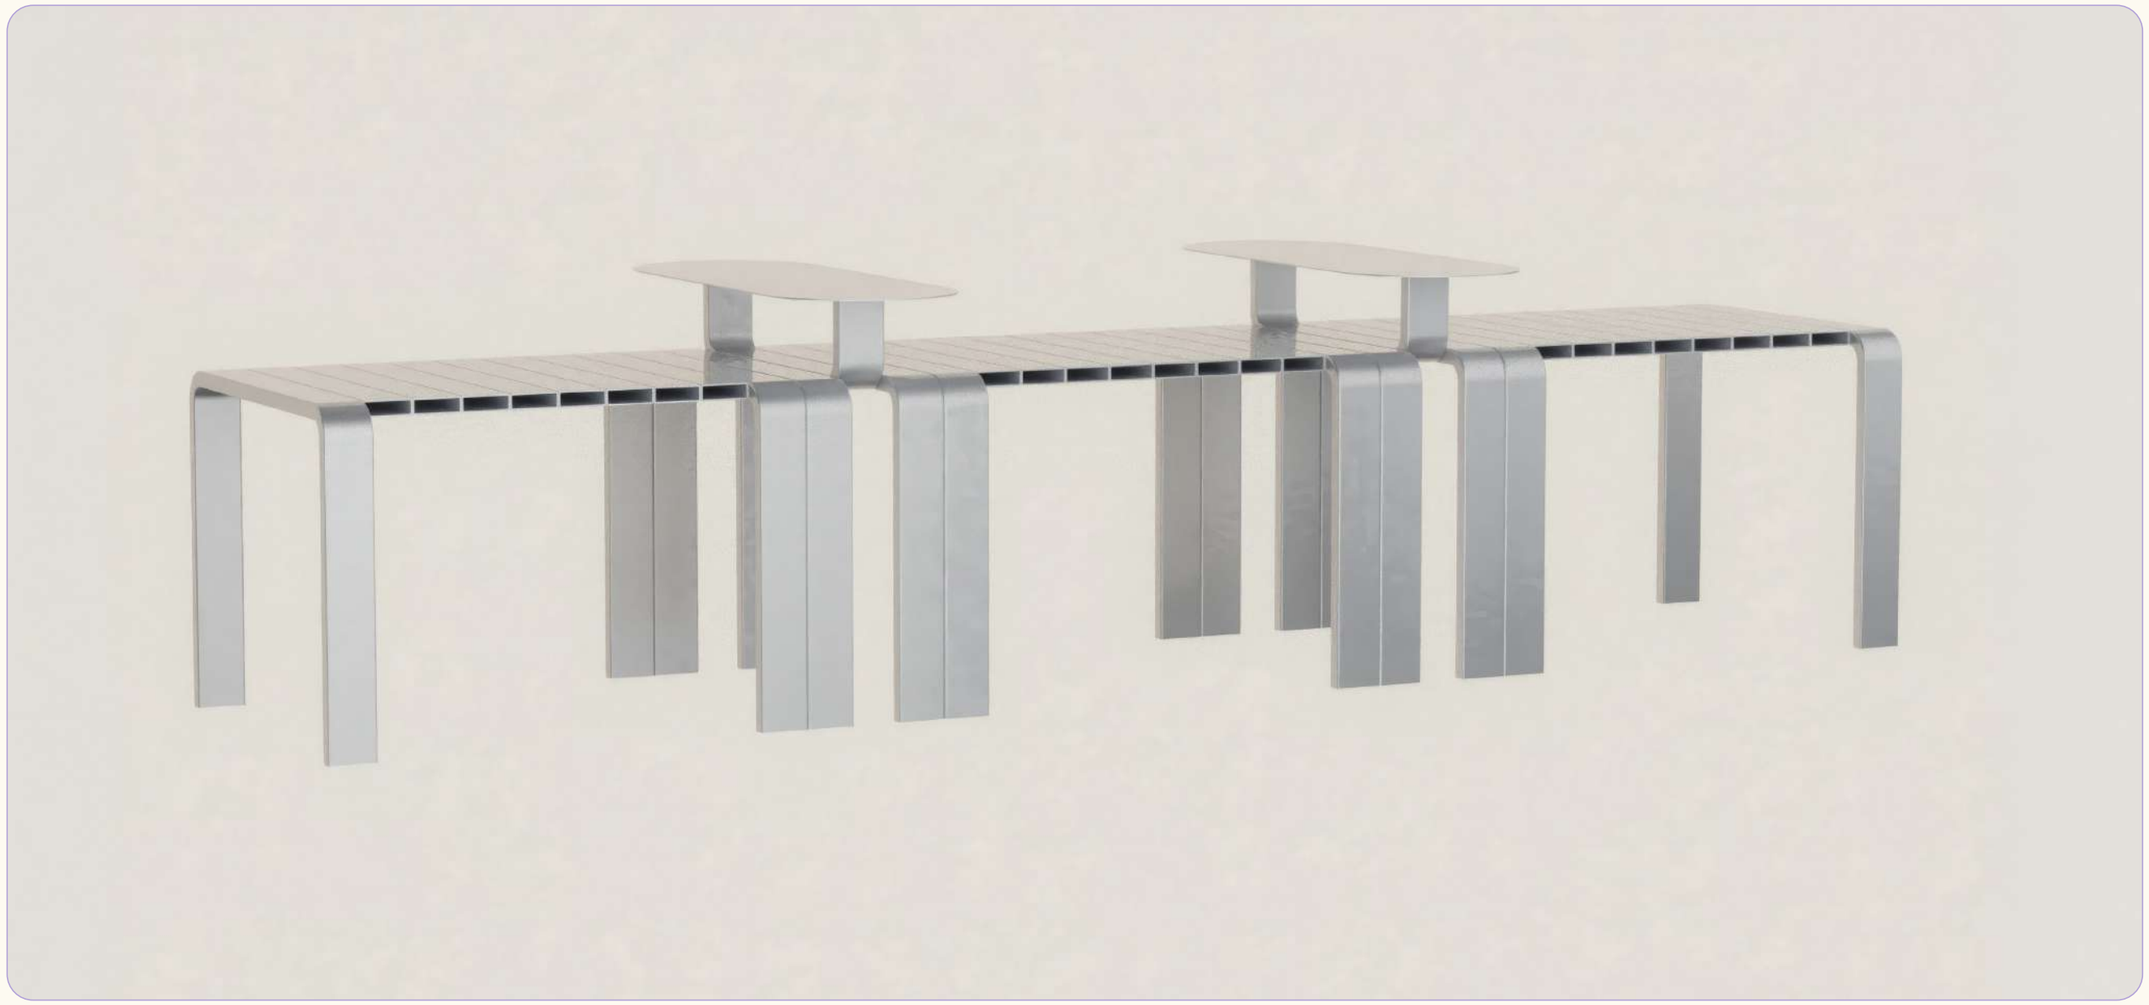

(03) Another element is connected by simply pushing it downward from above, fitting the hooks into the slots.

Modular furniture collection

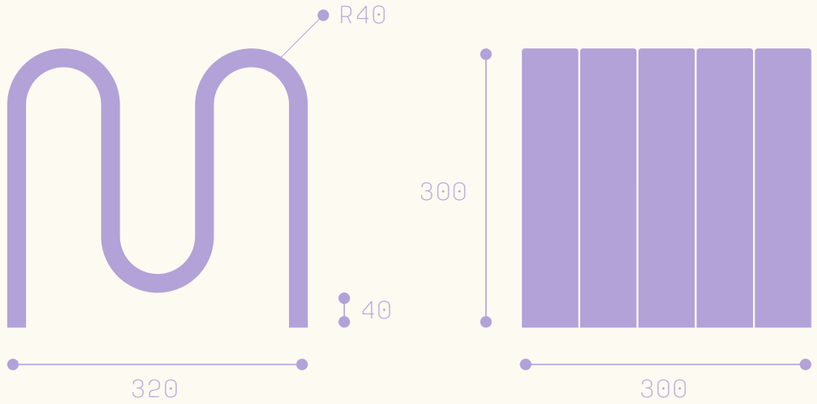

2) Additional products

Magazine Holder

The first complementary product of the collection is a magazine holder. Consistent with the design language of the series, it is also constructed entirely from 6 × 2 cm rectangular hollow steel tubes. As with the modular seating system, multiple units can be aligned next to each other to accommodate various spatial contexts and functional needs.

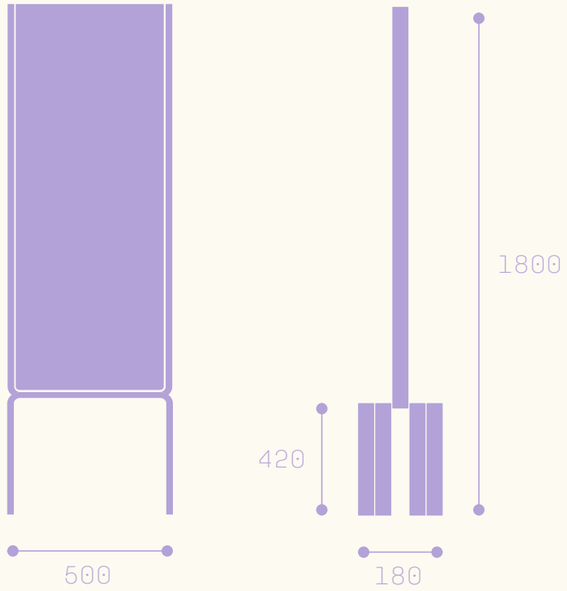

Potential Retail Application (Café)

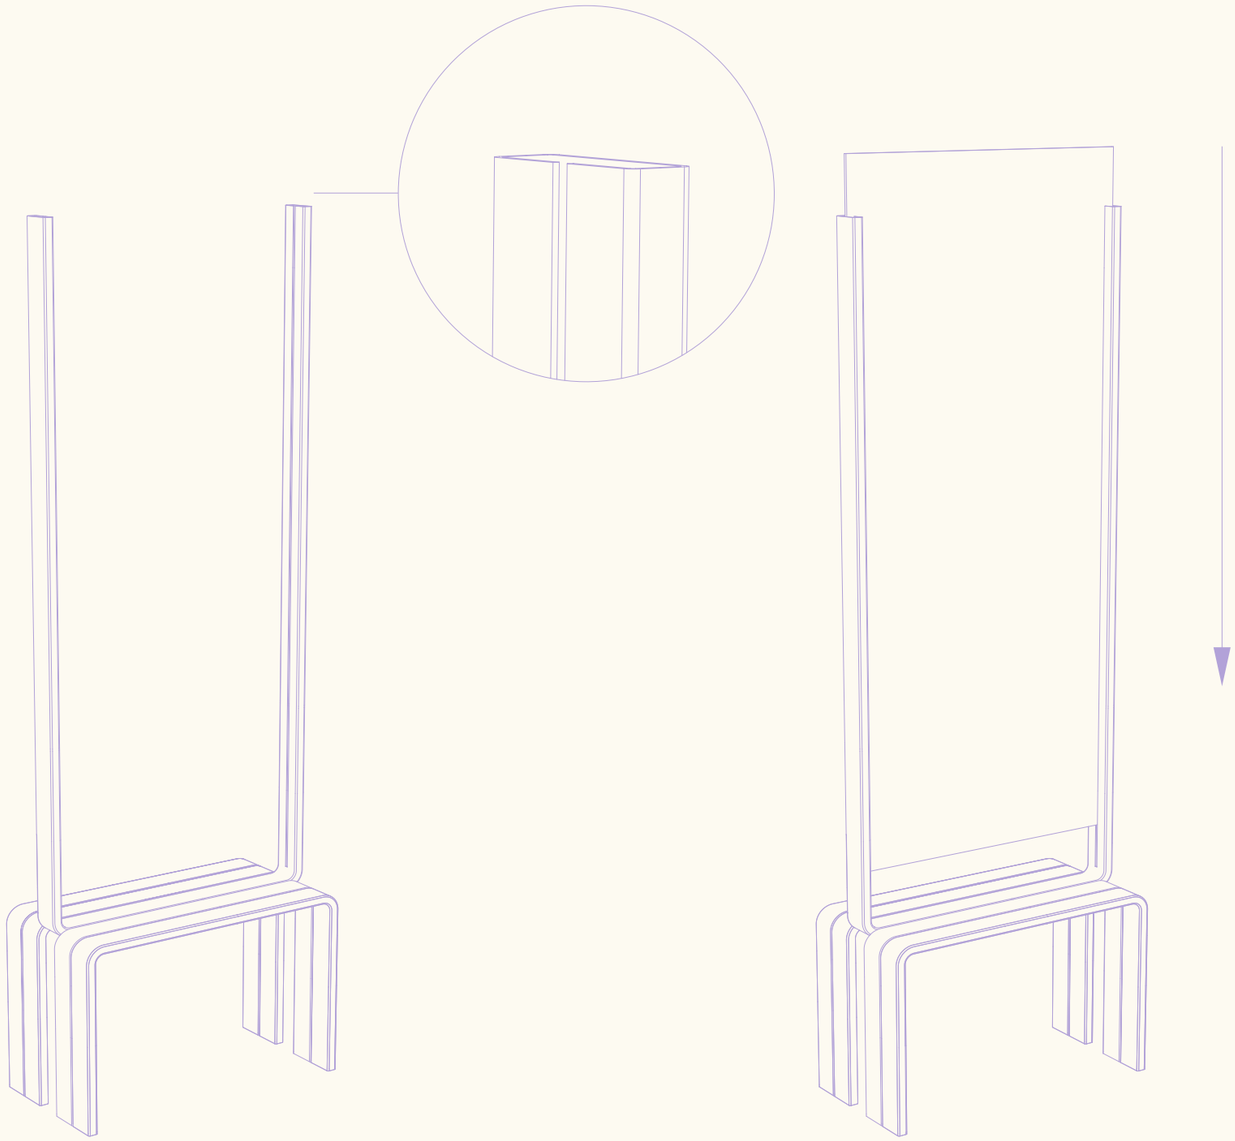

Mirror

The second complementary product in the collection is a standing mirror. Consistent with the design language of the series, it is constructed entirely from 6 × 2 cm rectangular hollow steel tubes. Designed to provide a full-body reflection, the mirror fits naturally into both home and retail environments.

Construction

The stainless steel frame features cutouts on both sides that correspond to the thickness of the mirror screen. The screen simply slides into the frame through these openings and is securely held in place without the need for additional fixtures. This assembly solution makes installation easy and allows the mirror screen to be replaced quickly in the event of damage.
