CHANGO

A support, a helping hand, an aid. In times of urgency and limited space, CHANGO emerges as a pause, as a small gesture of comfort that, amidst the noise and chaos, facilitates the everyday rituals that help ease the burden of the week.

Within an already established furniture category, CHANGO is reimagined as a whole that, in turn, can be broken down to give rise to two independent products. In this way, the collection is composed of a cart, tray, and light.

Through the signature curved tubular steel, bending steel sheets, and their combination with ALPI wood details, evoking their Italian roots, these elements come together to form a novel and disruptive proposal.

The platform concept goes beyond an integrated product that can be broken down to give birth to two additional products. CHANGO proposes a modular configuration that allows not only for the creation of a Minibar cart, but also a Bookcase, a Mini Disco, or whatever else you desire.

The minibar cart, highly functional and portable, combines an industrial aesthetic with a strong design identity. It functions as a storage unit, support surface, and means of transportation.

A tray can be removed from the cart, allowing selected objects to be carried from the cart to other spaces, such as an armchair or table, thus extending its reach and functionality. Once separated from the cart, the tray provides greater proximity and convenience for the user.

Finally, an independent light can be detached from the handles, functioning as a small bedside-style lamp. It can be used to illuminate the cart itself, accompany the user in the space where the tray is placed, or operate independently as another object within the collection.

Product Family

Minibar

The Minibar takes an existing typology—the bar cart—and reinterprets it through a contemporary lens, incorporating Situér's signature design language, with an aesthetic defined by the expression of curved tubular steel. The structure combines functionality and presence, creating a recognizable object that, beyond its conventional use, acquires a new aesthetic and conceptual value.

Its main innovation lies in its ability to be disassembled and transformed into two additional independent objects. The handle can be detached and turned into a cordless lamp, while the support surface can be removed and carried to an armchair or table, functioning as a tray. In this way, the cart ceases to be a static object and becomes an experience. The piece also incorporates features specifically designed for the preparation and serving of drinks: storage spaces for liquor and wine bottles, an ice bucket, and a drawer for utensils.

Cart, lamp, and tray reach their full meaning at the moment of the toast. Each piece becomes part of the same experience, accompanying the gestures that shape that moment: preparing, carrying, serving, illuminating, and sharing. The object thus becomes the centerpiece of an atmosphere of enjoyment and pause.

Bookcase

The Bookcase reinterprets the typology of the bar cart, adapting it to the world of reading and the needs of compact living spaces. Its curved tubular steel structure incorporates Situér's signature design language, while its dematerialized structure allows books to take center stage, functioning both as storage and display.

The cart is also disassemblable and transformable into two independent objects: the handle can be removed and converted into a cordless lamp, while the support surface functions as a mobile tray that can be carried to an armchair or table. It also incorporates dedicated spaces for books and compartments for sheets, pencils, notebooks, and other accessories.

Its mobility allows it to accompany the act of reading throughout different spaces of the home, carrying books, objects, and light with it. The Bookcase transforms and redefines reading as a dynamic experience, where design accompanies moments of pause, concentration, and enjoyment.

Mini Disco

Mini Disco completes the trilogy of carts by connecting it to the world of music. A structure of curved tubular steel defines a piece with a strong visual presence, where Situér's signature design language combines with an open composition that puts its contents on display. The turntable, vinyl records, and speakers are no longer simply stored objects, but become part of the furniture's identity and of the listening experience.

Its configuration incorporates a central space for the turntable, dedicated areas for storing and displaying vinyl records, surfaces for speakers or soundbars, and drawers for smaller accessories such as headphones, cables, and other objects. As part of the system, the handle can be removed and transformed into a cordless lamp, while the upper surface can be detached and used as a tray, extending the experience to an armchair, a table, or any other space within the home.

The Mini Disco cart creates a setting for listening to music. Its mobility allows the ritual to move with the user, turning different spaces into temporary places for engaging with sound. Vinyl records, light, and personal objects come together in a single experience, where choosing a record, deciding what to listen to, and sharing it become part of an everyday ritual of pause, enjoyment, and connection.
