Mou		a modular system for everyday configurations	metal tubular profiles with 2 cm dimensions	cobalt blu / pigeon blu black red / pearl gold

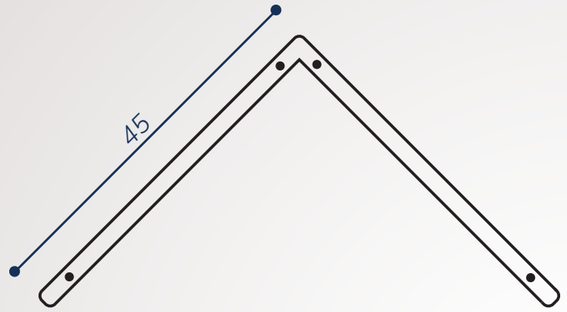

106132

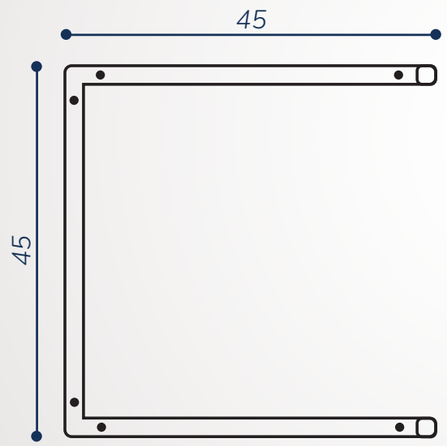

MOU starts from one essential module: a **C-shaped frame** measuring **45×45×45cm**, made from **2×2cm square metal tubing.**

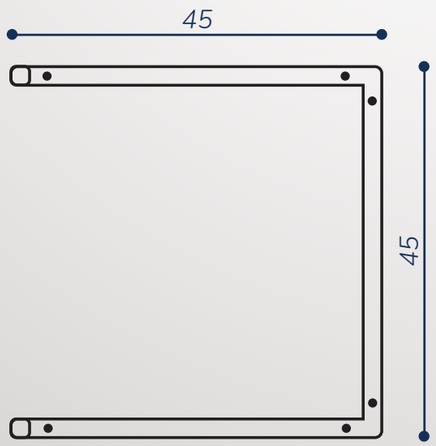

This single element becomes the base of the entire system.

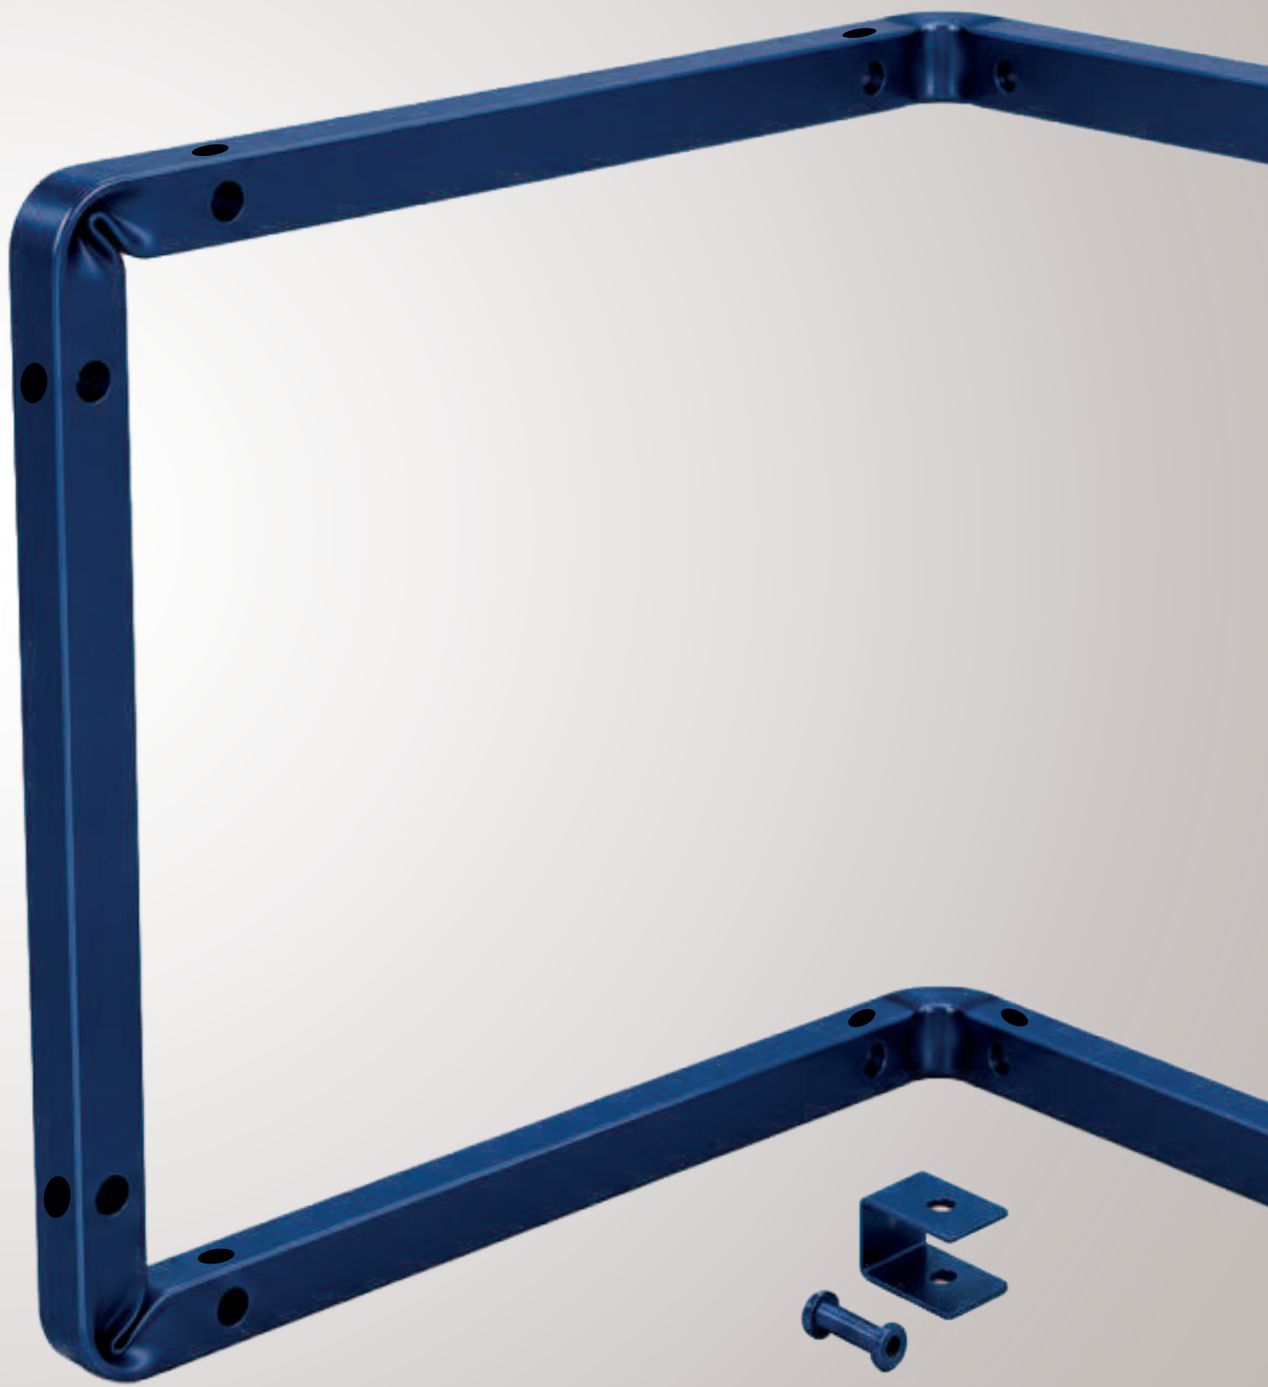

By rotating, combining, stacking and repeating the module, different configurations and functions can be created.

MOU is not a single object, but an open modular system capable of generating multiple pieces of furniture from one simple geometry.

106132

perforated metal panel

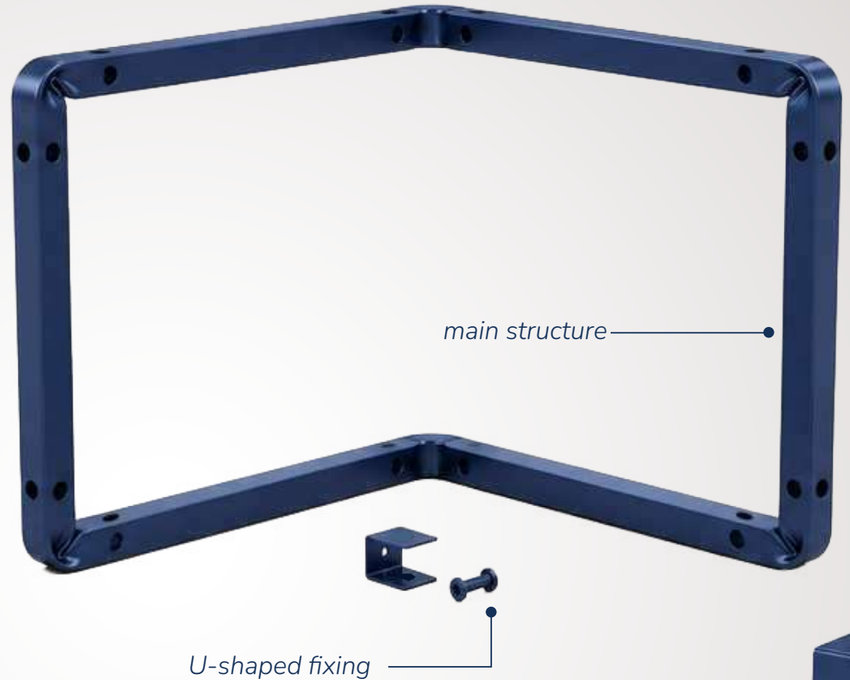

metal panel with integrated box

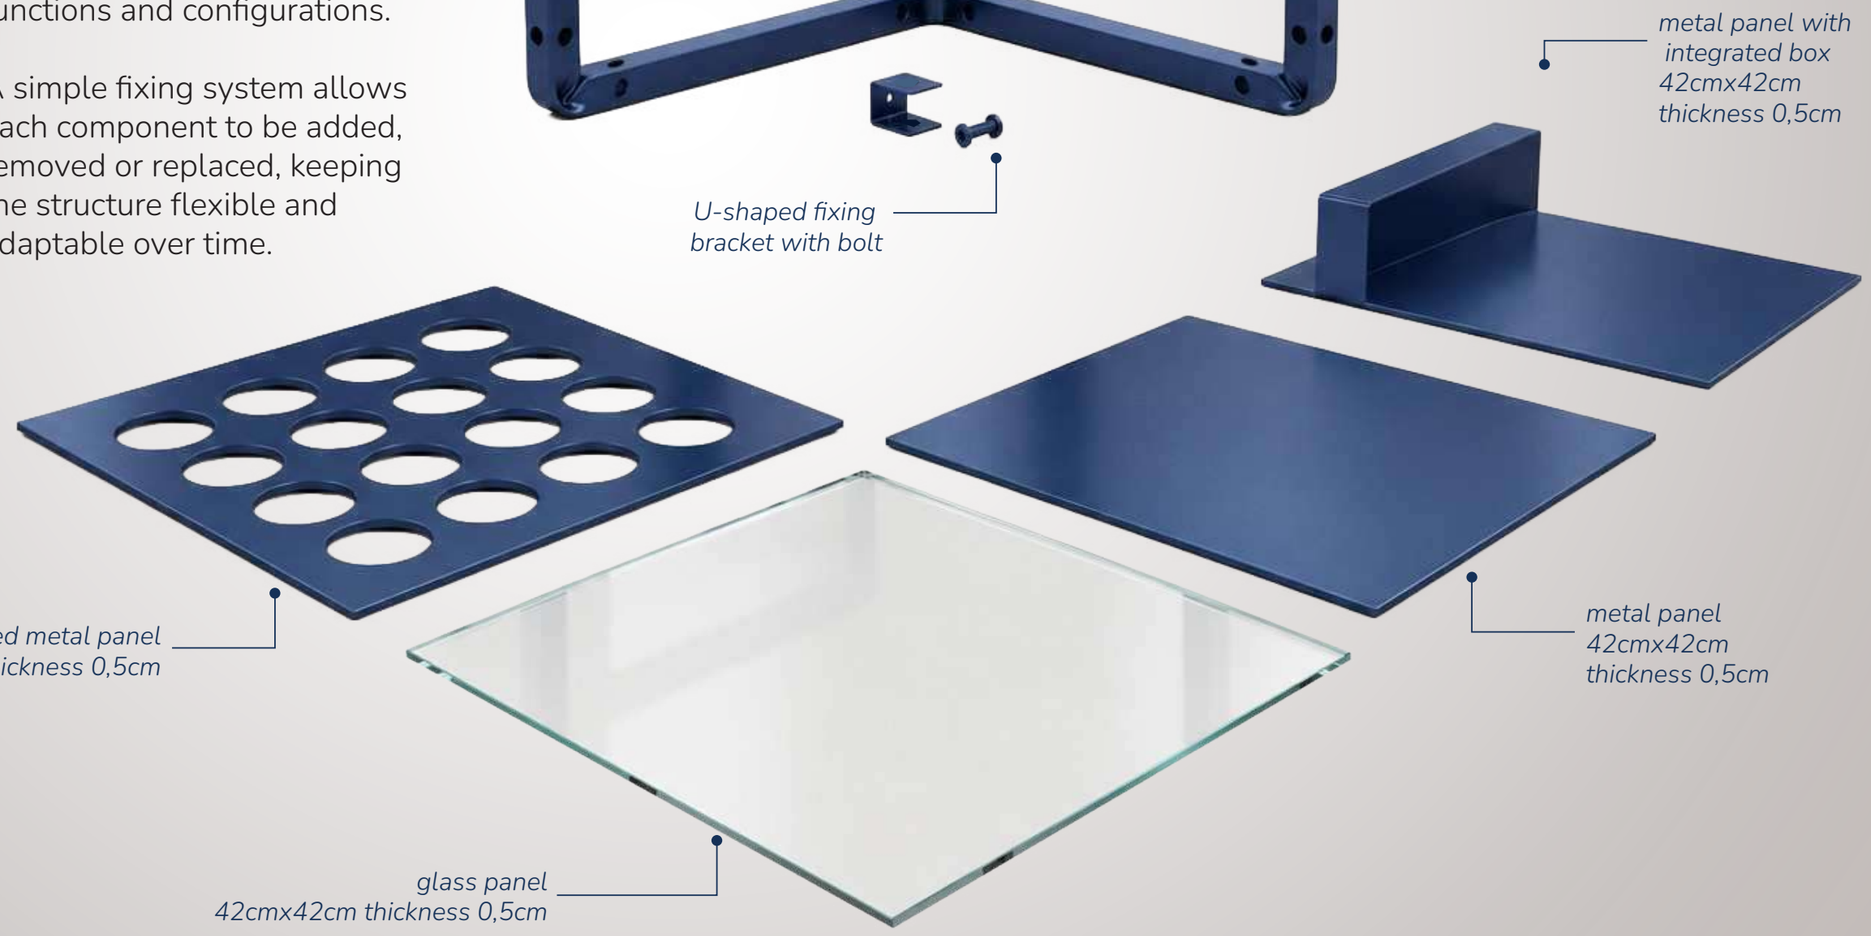

MOU expands through a **set of interchangeable elements** designed to fit the same modular frame.

Perforated metal panels, solid sheets, glass surfaces and integrated boxes can be combined with the main structure to generate different functions and configurations.

A simple fixing system allows each component to be added, removed or replaced, keeping the structure flexible and adaptable over time.

Fixing system

GLASS PANEL FIXING
The glass panel is supported by small **metal brackets fixed to the tubular frame**.
The brackets hold the panel, while the glass simply rests on them without being drilled.
This solution keeps the panel visually light and allows it to be **easily removed or replaced.**

STRUCTURE-TO-STRUCTURE CONNECTION
The modular frames are connected to each other through **pre-drilled holes and visible bolts.**
The same fixing points can be used to combine the elements in **different configurations**, making the system easy to assemble, disassemble and reconfigure.

106132

Magazine rack

The element is assembled through a simple mechanical fixing system using brackets and bolts, allowing the components to remain removable and interchangeable.

front view

ASSEMBLY ELEMENTS

1 x Mou structure

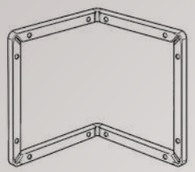

1 x metal panel with integrated box

- *4 x bolt*
- *4 x bracket*

The magazine rack is created by folding the basic MOU module into an A-shaped configuration and adding a single metal panel with an integrated box.

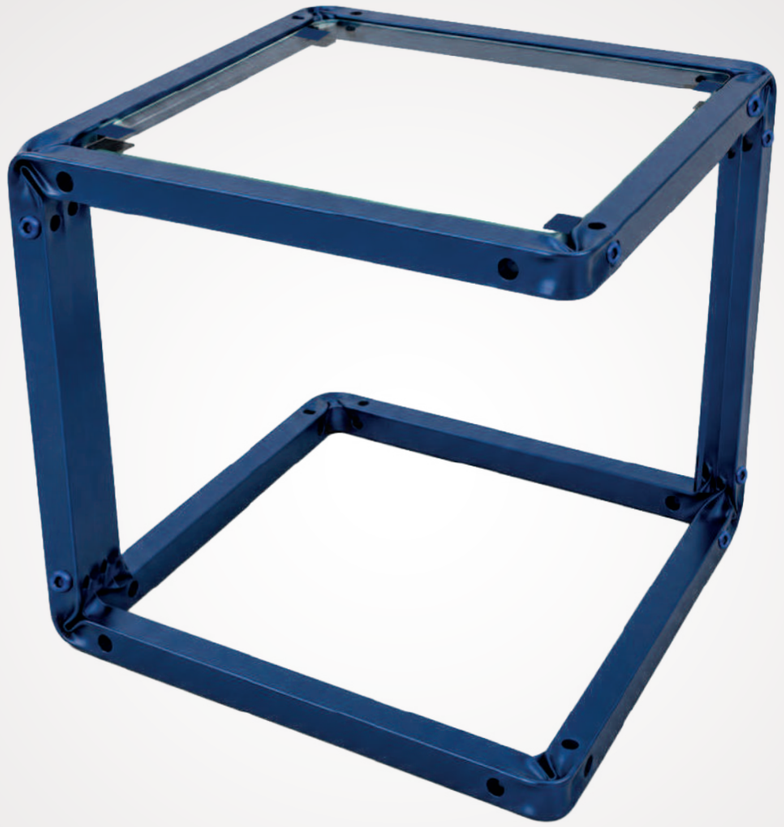

The 45×45cm structure becomes both support and frame, while the inserted metal panel creates the surface for holding magazines.

106132

Coffee table

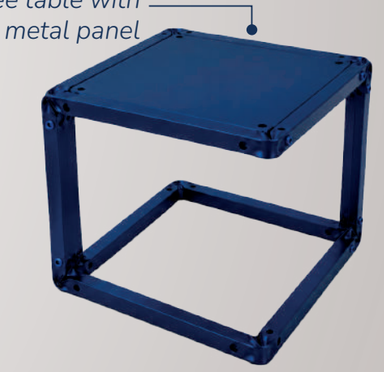

The same structure can also accommodate **alternative surfaces**, such as a solid metal panel or a perforated metal panel, allowing the object to **adapt to different uses and configurations.**

OTHER POSSIBLE CONFIGURATIONS

umbrella stand

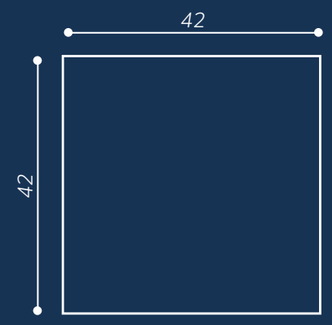

coffee table with metal panel

ASSEMBLY ELEMENTS

2 x Mou structure

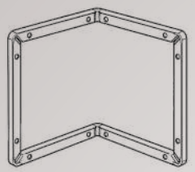

1 x glass panel

- *8 x bolt*
- *4 x bracket*

The **coffee table** is created by combining two MOU structures and connecting them through a simple system of brackets and bolts.

A 42×42 cm glass panel is then added to complete the top surface, while preserving the visual lightness and modular identity of the system.

106132

Bookshelf

A **flexible shelving system** based on a single modular structure, designed to be combined and stacked in multiple configurations.

Different types of surfaces (open frames, solid metal panels, perforated panels or glass) can be integrated within the same system, allowing each composition to **adapt to different functions, spaces and ways of use.**

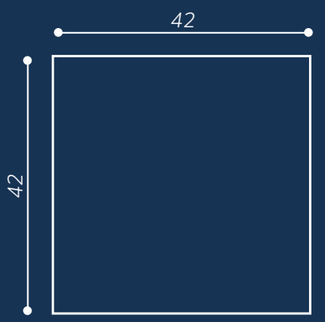

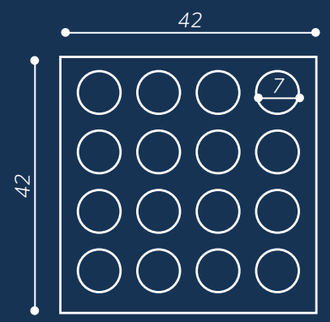

ASSEMBLY ELEMENTS

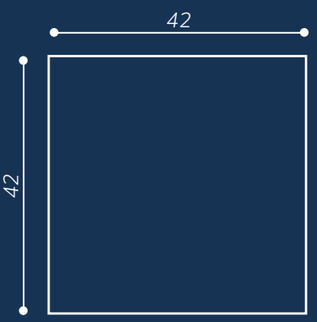

6 x Mou structure

1 x glass panel

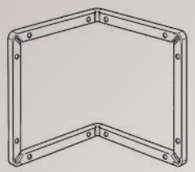

1 x perforated metal panel

1 x metalpanel

- *24 x bolt*
- *12 x bracket*

Colours

cobalt blue - RAL 5013

pigeon blue - RAL 5014

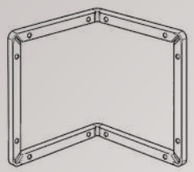

pearl gold - RAL 1036

black red - RAL 3007

A carefully selected palette of contemporary colours gives the system different identities while preserving its versatility.
From the depth of cobalt blue and black red to the softness of pigeon blue and the warmth of pearl gold, **each finish is designed to suit different tastes, atmospheres and interior contexts.**

A SYSTEM DESIGNED TO CHANGE.

Mou is a **modular furniture system** built around a **single structural element that can be repeated, combined and reconfigured to create different objects and spatial solutions.**

The project explores **adaptability** through **simplicity**: one frame becomes the starting point for **shelves, tables, storage units and open compositions**, changing according to the way it is assembled and completed.

Different surfaces; solid, perforated or transparent, extend the possibilities of the system, while a carefully selected colour palette gives each configuration a distinct identity. Contemporary finishes allow Mou to move across different interiors, functions and personal tastes without losing its recognizable character.

Rather than defining a fixed piece of furniture, Mou proposes an open system: **a structure designed to evolve, adapt and be reinterpreted over time.**

WHY “MOU”?

Mou is a name born from the encounter between **MODULAR** and **YOU**.
The system starts from a **single module**, but its **final form is defined by the user:** elements can be combined, stacked and completed in different ways according to individual needs, spaces and preferences.
