Borne

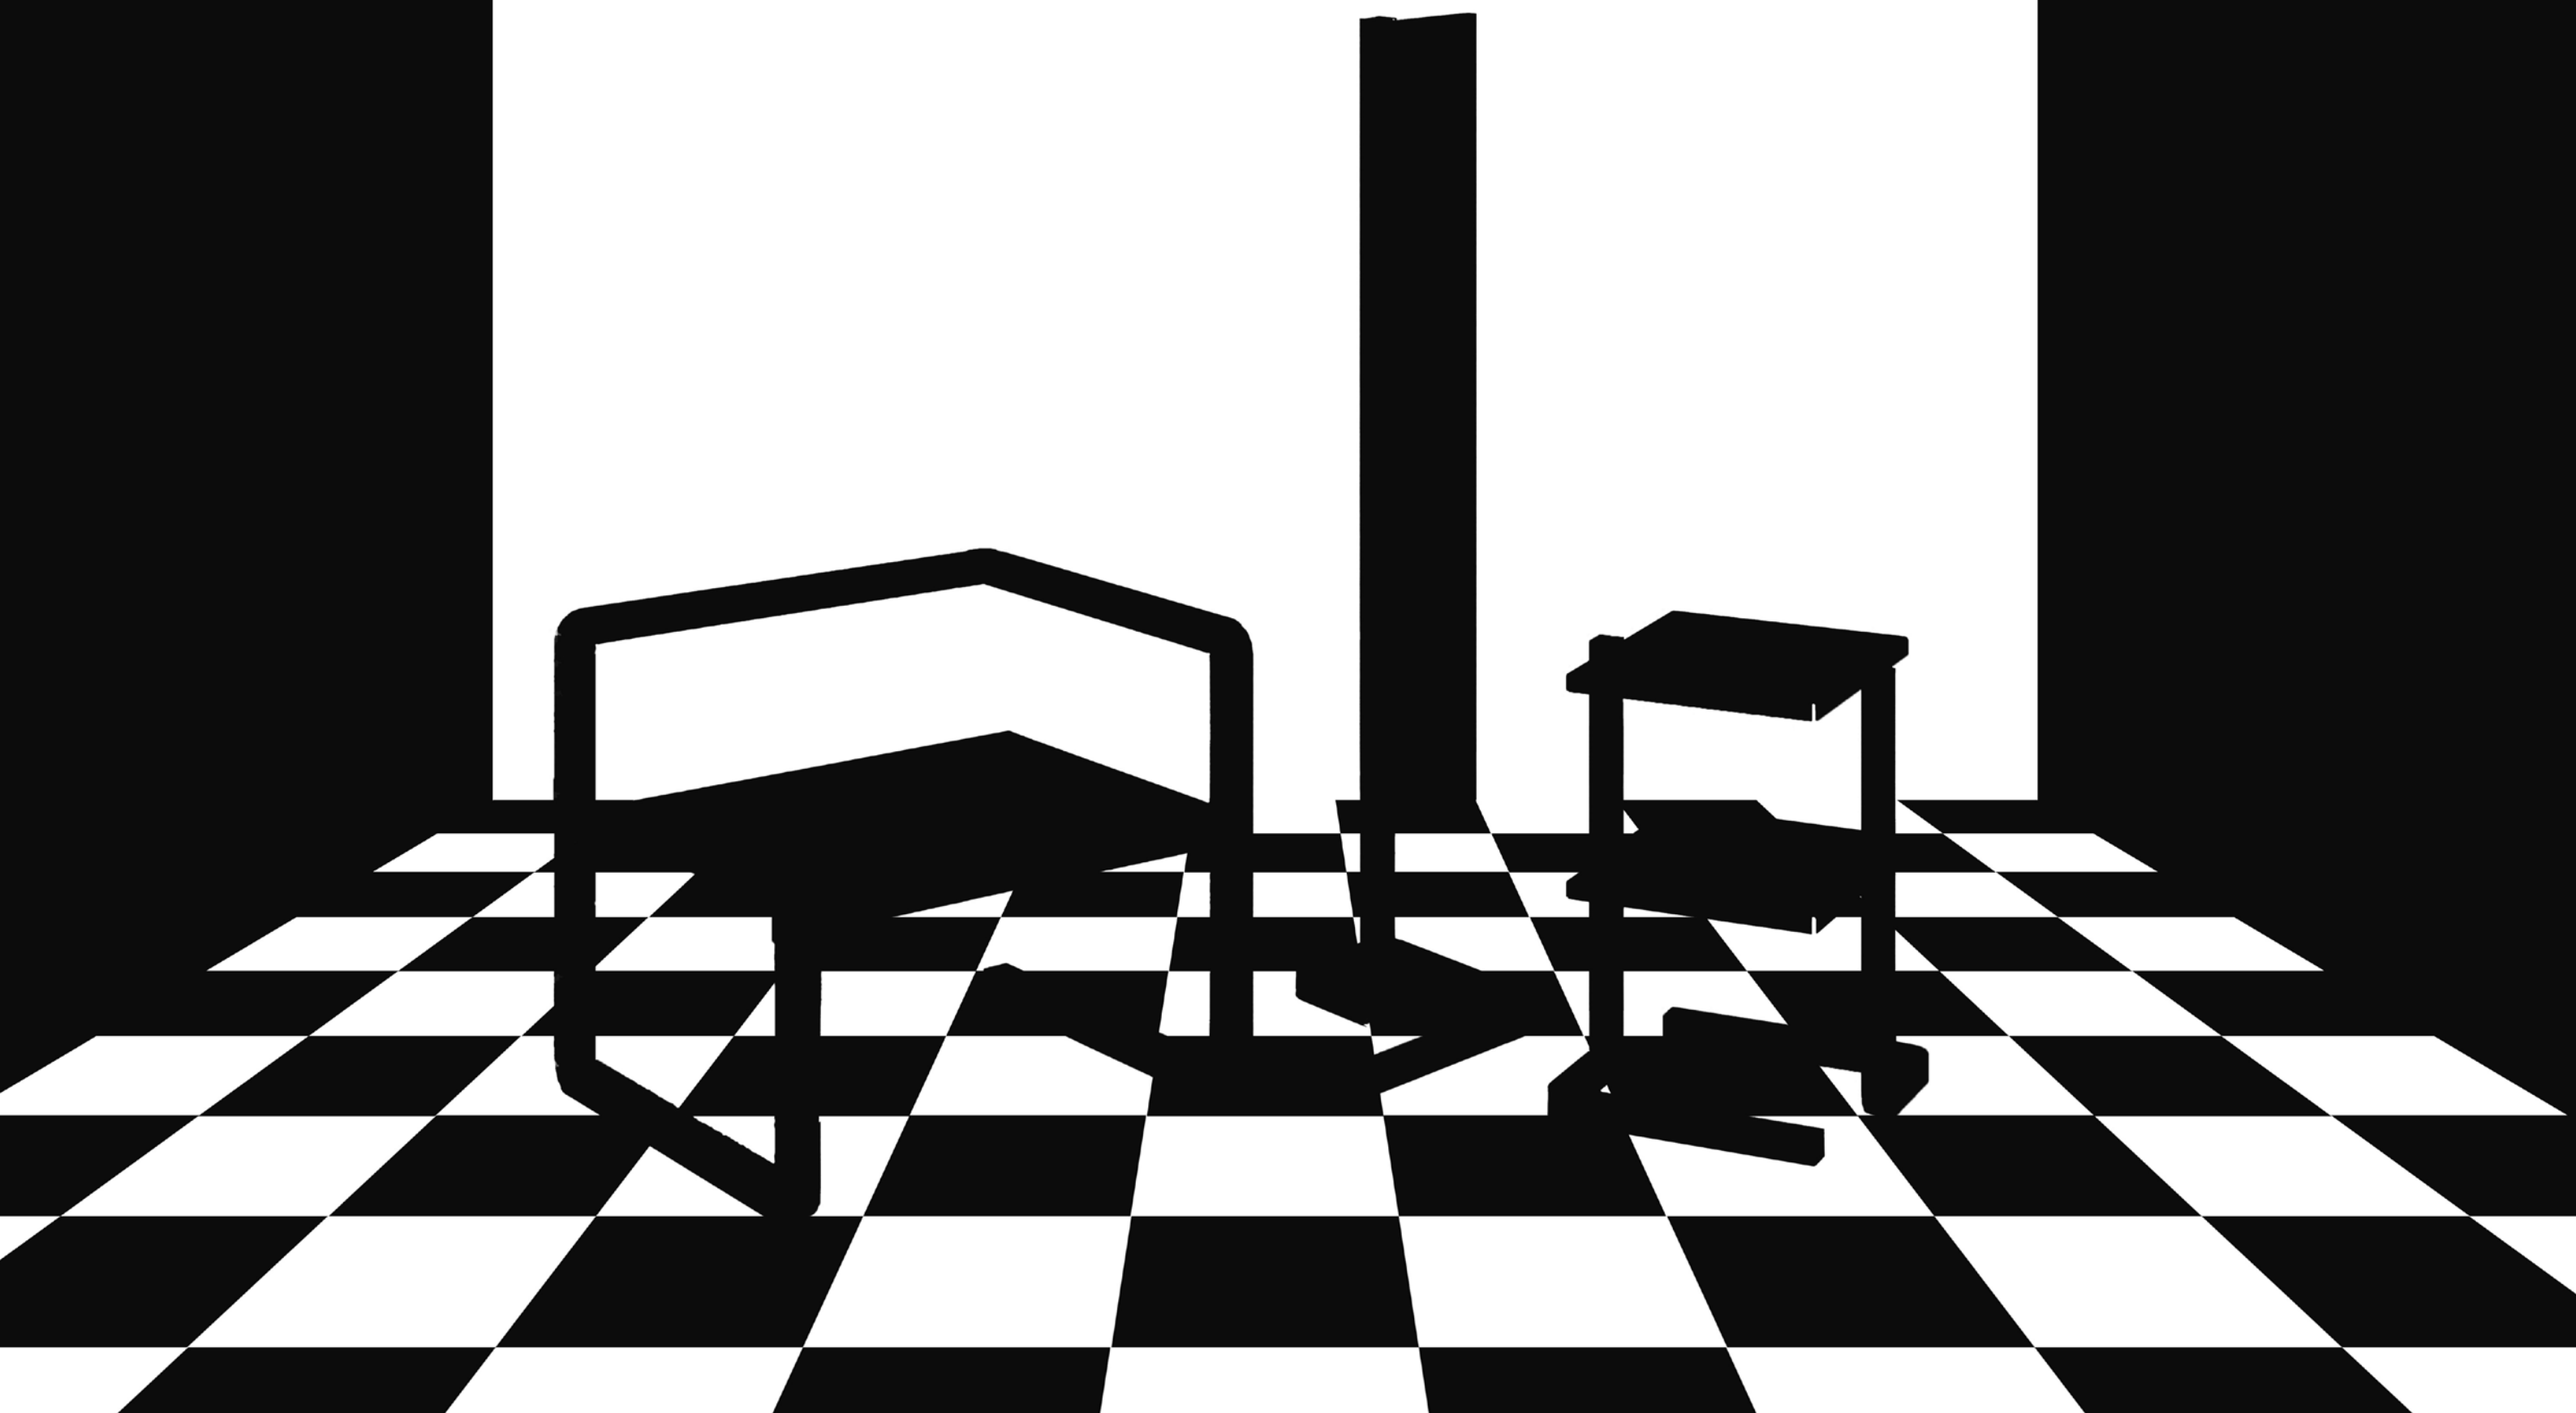

A Growing Family

Borne takes its name from the idea of being carried, supported, and brought forth by a common origin. In this collection, we began to see the "C" bend not simply as a formal detail, but as a structural element that forms the trunk of a tree, generating a language rooted in Situér Milano's identity, from which different forms and functions grow. As a branch bears different fruits, the same structural logic can give rise to a chair, a transforming side table, or a lighting element, each distinct in function and expression, yet connected by the same DNA. Borne therefore frames the collection not as a series of isolated objects, but as a growing family of possibilities, through which one structural logic can continuously generate new forms.

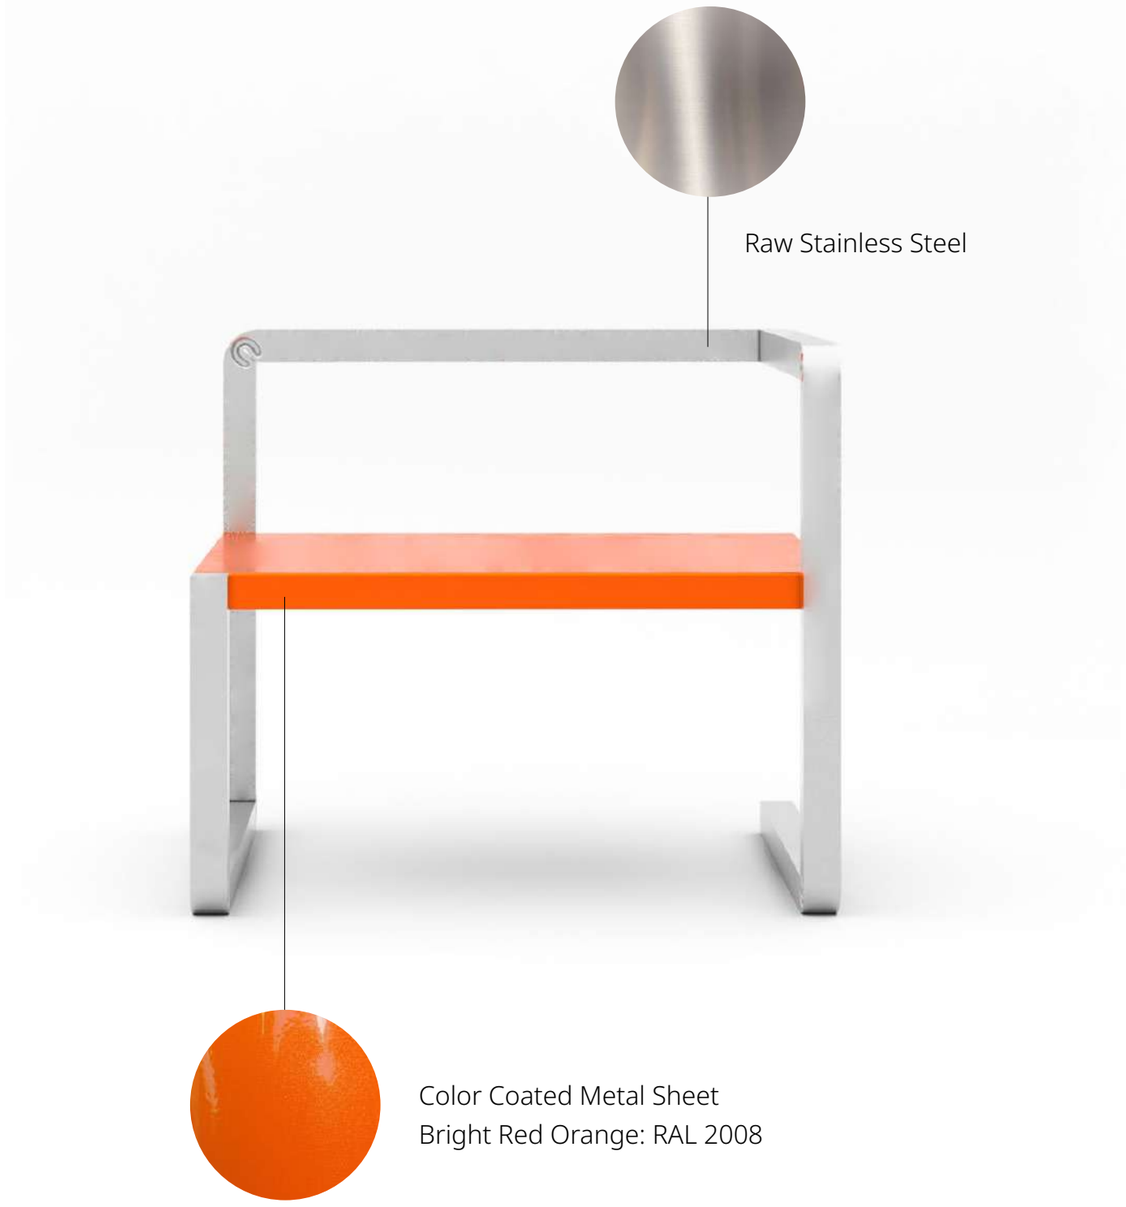

Each piece begins with a structural frame made from steel profiles, incorporating the distinctive "C" bend as a common identity. A separate bent sheet is then added to each structure through the same connection method, taking on different forms according to its function. These elements act as the “fruits” of the system, completing each object while allowing the same structural logic to generate diverse products.

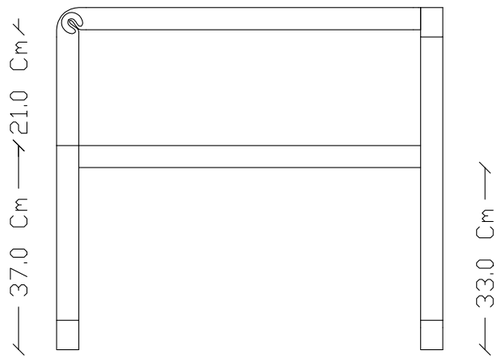

Interval

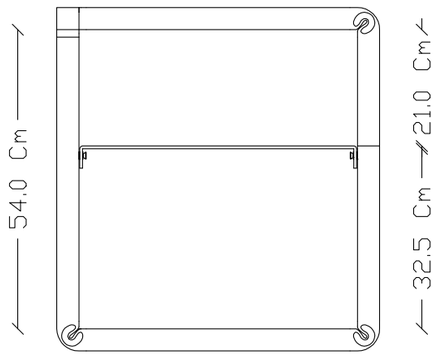

Interval is the core piece of the collection: a contemporary armchair designed for moments of pause and short periods of rest. Its base interprets Situér's signature motif, forming an effortless structural frame for the seat shell while moving away from the conventional four-legged chair typology.

x1 Custom Bent 4 cm Square Profile

x1 50x62 cm Metal Sheet with Parallel Bent Edges

x3 Rivet Nut & Screw Set

The seat is secured to the profiles using screws and rivet nuts. Pre-drilled holes are provided in the sheet metal and on one side of the profile to accommodate the assembly. While relying on a conventional, simple, and manufacturable fastening method, the joint is carefully positioned to remain concealed. This preserves a clean visual expression and supports Situér's functional and minimalist identity.

Ally

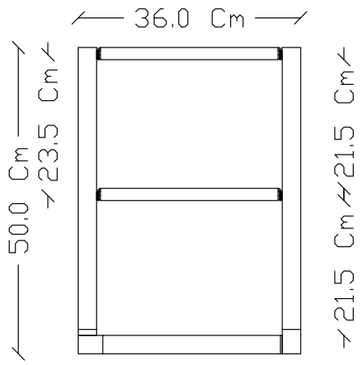

Ally is a flexible and functional side table, conceived as an agile companion that can adapt to different settings, from homes and offices to retail environments. Its components can be fully disassembled, facilitating efficient shipping and handling. The table can be configured with either one or two tiers, while the shelves can also be installed diagonally to securely hold magazines or similar items.

	x2	30x30 cm Metal Sheet with Bent Edges
	x4	8mm Rivet Nut & Screw Set

Squad

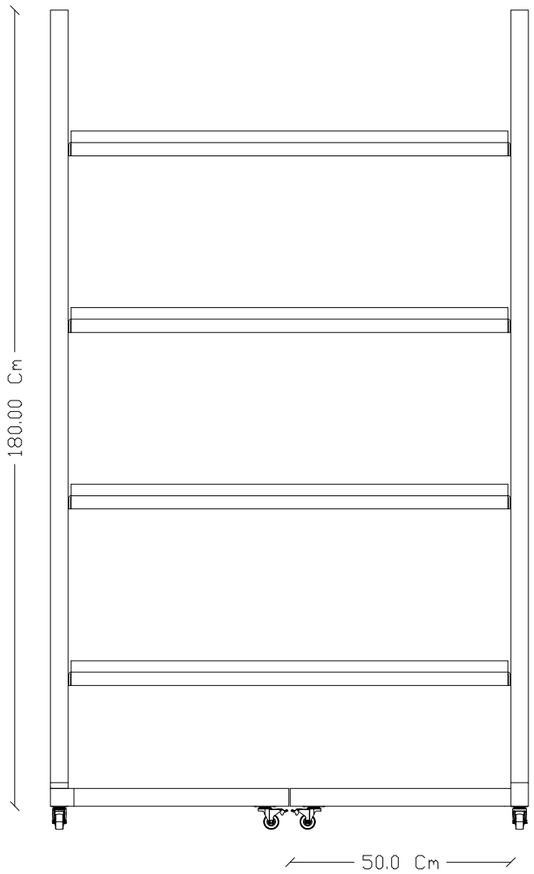

Squad develops the design logic established by Ally, with revised proportions that allow it to function as a bookcase, storage unit, or display system. The shelves connect the two vertical supports and perform an essential structural role, with the components relying on one another to achieve stability and carry loads. Integrated casters allow the unit to remain easily mobile despite its overall weight.

The shelf edges are bent to create the required level for the screw connection to the profile while keeping the fasteners concealed beneath the surface. Although technically simple, its strategic placement makes the shelves appear to achieve their stability with a certain degree of subtlety.

	x2	Custom Bent 4 cm Square Profile
	x4	40x100 cm Metal Sheet with Bent Edges
	x4	Locking Furniture Caster
	x8	8mm Rivet Nut & Screw Set

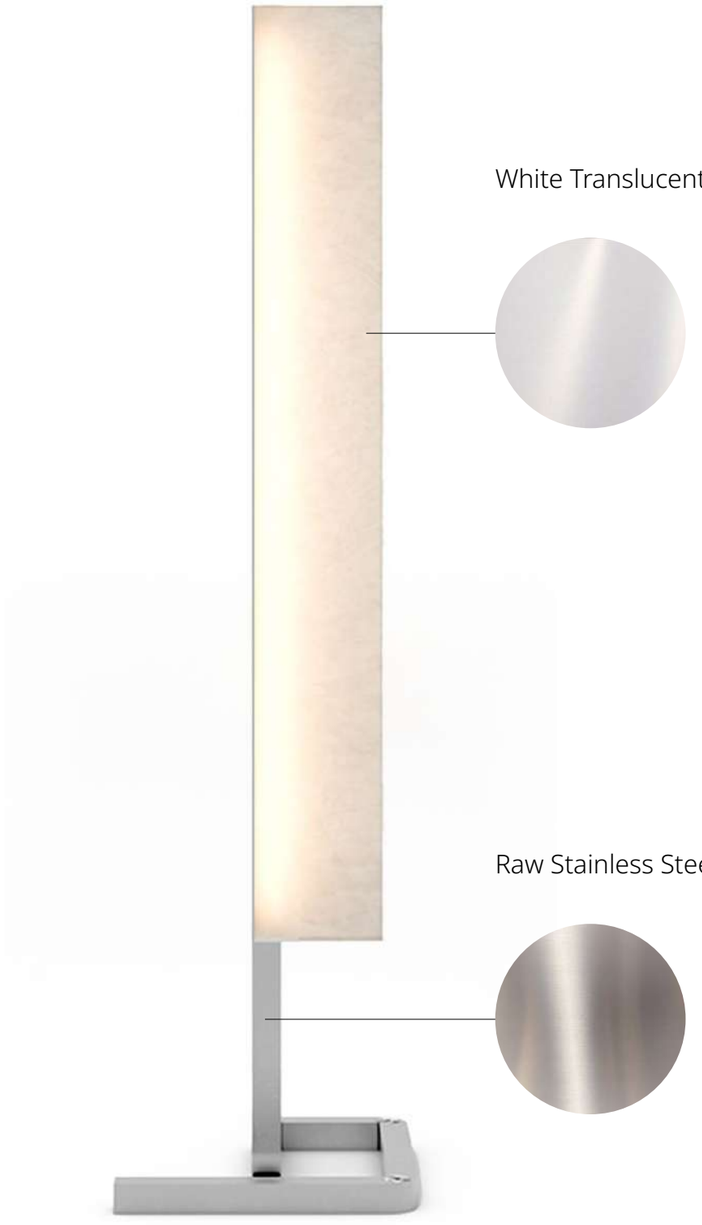

The design allows the shelves to be fixed diagonally on the profiles, enabling them to function as display surfaces for books and magazines. The opposing bend directions of the two edges also create a subtle retaining feature.

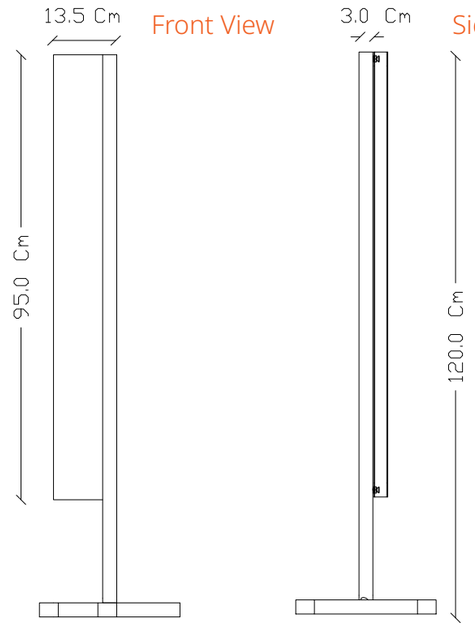

Beam

Beam is a minimalist floor lamp designed to integrate into a range of contemporary interiors, either independently or alongside other pieces in the collection. Rather than demanding attention, it is conceived as a team player that complements diverse environments and preferences. Developed from one of Situér's existing lighting products, its construction is familiar and straightforward: a bent acrylic plexiglass diffuser is fastened to a metal profile containing the light source, softening the illumination and giving the space a more refined atmosphere.
