PASSO

PASSO

The collection develops from one of the most recognizable features of Situèr's design language: the bent tubular element. Reimagined as a joint, almost like a knee, this bend naturally suggests the addition of a foot, introducing an anthropomorphic quality to the objects.

The foot thus becomes the defining feature of the entire family, giving each piece a distinctive presence, almost as if the objects were small characters inhabiting the space. This creates a playful, pop-inspired identity, interpreted through an essential and refined language that remains consistent with Situèr's aesthetic.

Conceived as a highly standardized component, the foot establishes a common language across different product typologies while also defining an open design principle that can be extended to new objects, allowing the collection to grow and evolve over time.

The same approach to simplicity is reflected in the construction of each piece: a limited number of components, simple and standardized connections, and fully mechanical assembly systems, without the use of welding.

STOOL

The stool represents the most immediate expression of the collection’s design language. Its simple typology allows the structure to take center stage, highlighting the bend and the foot that visually completes its movement.

The essential seat contrasts with the more expressive character of the base, creating an object that is simple yet highly recognizable. The anthropomorphic detail is not applied as decoration, but emerges directly from the geometry and construction, turning the stool into the first “character” of the family.

The stool is presented in three main finishes: sandblasted stainless steel, matte black and polished brass.

Its pop-inspired character naturally lends itself to color, allowing the structure to be customized across Situèr's RAL palette and adapted to different interiors and identities.

An additional version introduces a wooden seat, available in different wood species, creating a warmer contrast with the metal structure.

CONSOLLE

The console reveals a different character from every point of view. Its four bent legs overlap and interact visually, creating changing geometries as the observer moves around the object.

This shifting perception gives the piece a dynamic presence, while maintaining the same recognizable language of the collection.

The console can be configured with different top materials, adding further versatility to the collection.

A wooden top is available in different wood species, creating a warmer contrast with the metal structure. Alternatively, a glass top can be introduced to reveal the structure beneath and highlight Situèr's characteristic bent tubular detail.

This combination of finishes and materials gives the piece a more open and versatile character, adapting easily to different interiors and expressions.

MIRROR

The mirror leans against the wall through two differently oriented feet, one facing forward and one to the side, giving it an almost human posture, as if a character were casually resting against the surface.

Its simple construction also makes the design easily scalable. The mirror is presented in three different widths: 41, 65 and 95 cm while maintaining the same height, showing how the same identity can adapt to different proportions and spatial needs.

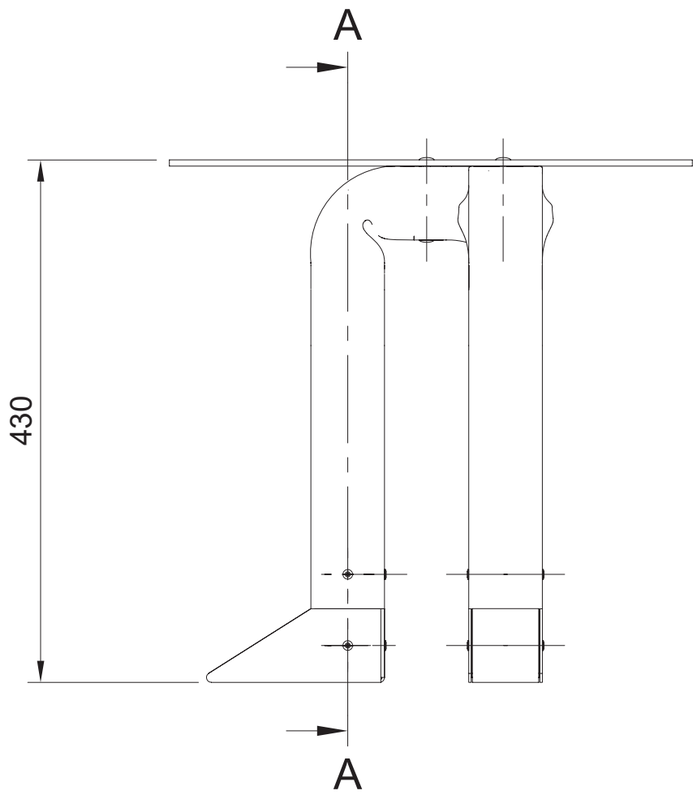

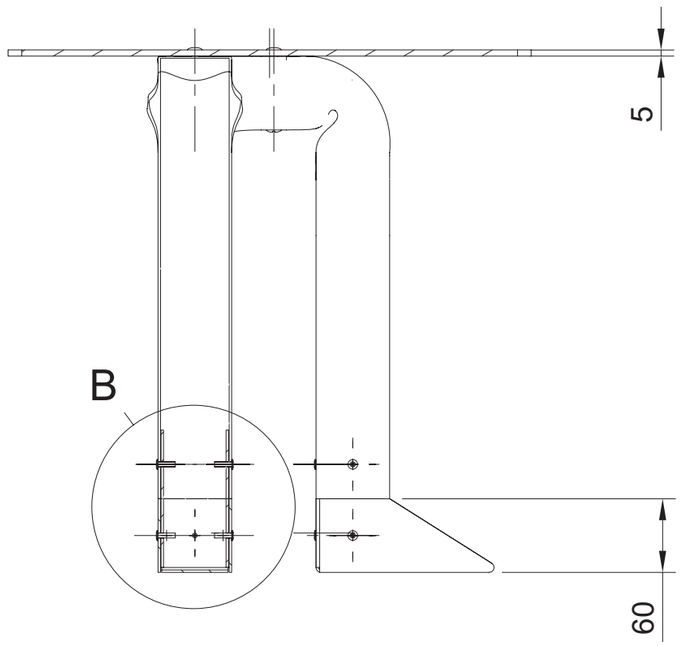

The mirror is presented in polished brass, sandblasted stainless steel and matte black.

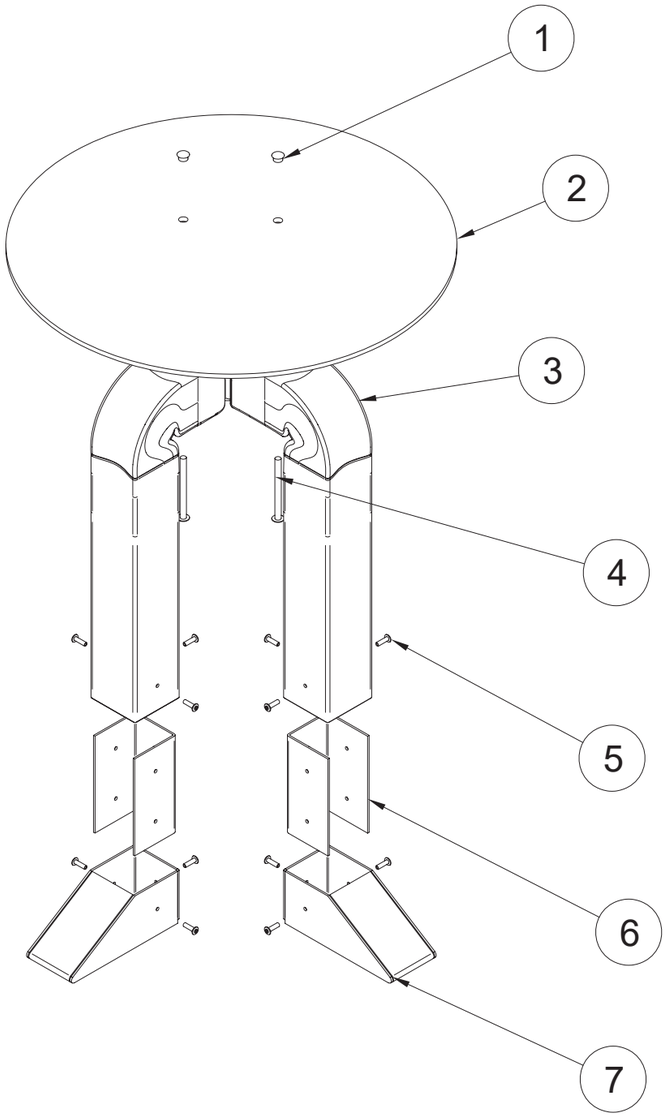

Its frame can also be customized in a wide range of RAL colors, allowing it to adapt naturally to different interiors and atmospheres.
